Knowledge Extraction Commission Pacific Environmental Paper Saving Initiative

In an era marked by unprecedented environmental challenges, the Knowledge Extraction Commission (K.E.C.) stands as a beacon of responsibility and commitment to sustainable practices. It is with great pride and a sense of urgency that we introduce the Pacific Environmental Paper Saving Initiative, a bold step toward fostering a greener, healthier planet.

As the custodians of knowledge, we recognize the significant impact of our actions on the environment. The Pacific Environmental Paper Saving Initiative is a testament to our unwavering dedication to mitigating climate change by reducing our paper consumption. The Commission acknowledges the urgent need to address environmental issues, and this initiative serves as a proactive response to the growing concerns surrounding deforestation, carbon emissions, and the overall ecological balance.

At the heart of this initiative lies our profound concern for the well-being of our planet. By championing paper-saving measures, we strive to alleviate the burden of climate change that disproportionately affects our global community. We firmly believe that every sheet of paper saved is a tangible contribution to preserving our precious ecosystems and combating the adverse effects of deforestation.

This initiative is not merely a policy; it is a collective responsibility that extends to each member of the Knowledge Extraction Commission. We recognize that the burden of climate change rests on the shoulders of every employee, and by embracing the Pacific Environmental Paper Saving Initiative, we empower our team to be catalysts for positive change.

Together, let us turn the page to a greener future.

The PEPSI PaperTracker™ indicates that you have almost reached your weekly paper quota. You have **121** pages left.

Raid

The K.E.C. has indicated that the information in this section is time sensitive.

The K.E.C. has received intelligence that there is a vehicle of interest close to your location. We have received a search warrant and will be executing a raid on said vehicle at 11:00 hours.

At least one (1) member of your team is kindly requested to meet us in the Engg Lounge at this time and we will guide you.

A member of the terrorist cell may be inside the vehicle when we execute the raid. They are to be assumed armed and extremely dangerous. Under no circumstances are you to approach the vehicle without your Engineering Liaison present.

Subject: RE: Failed Penetration Test for new OTP Flow

As per my previous email, I realize that the pentest failed and the one-time-passwords are "blatantly insecure" but I fail to see how that's our problem. I don't see how any reasonable person could get into the system unless they had a magical string of every sequence of numbers possible! And even then, it would have to be short enough to work before the attempts run out. What are they going to do? Paste it in?

Your continual disregard for how the world actually works is going to get you fired one day. I don't think we need to change the system.

Thanks,

Dean McCluskey, IT

KNOWLEDGE EXTRACTION COMMISSION

Suspect Tracking

The K.E.C. has indicated that the information in this section is time sensitive.

The K.E.C. Smartphone Infiltration Team has successfully returned from vacation and further infiltrated Isabella Moreau's smartphone, and we will now have access to her live location data. The device appears to be offline at this point, but we know from previous reconnaissance that she generally gets groceries around noon. We expect the device to start streaming location data around this time, and will update you with a link to that data when it becomes available.

We kindly request that a member of your team tail Isabella and retrieve for us

- A photo of her to confirm that her identity is consistent with our records.
- A photo of her car. The license plate would be ideal but if all you can get is the make, model, and colour then we will still consider this a win.

Do not approach the individual. She is to be considered armed and extremely dangerous. If you believe that she has spotted you and knows you are with the K.E.C., immediately leave the area. Your safety is far more important than this mission.

MEMORANDUM TO THE YEOMASTER

FOR INFORMATION

SUBJECT: Time sensitive materials

SUMMARY

This memorandum is to question the method of distributing time sensitive materials.

It does not really make any sense that we have all these time sensitive materials to distribute but you make us format them into information dossiers for distribution. If they were truly time sensitive, then surely it would be better to just send relevant data to contractors as it arrives?

I propose we set up a new information distribution system such that people get the information they need when they need it. The need less delays could be the difference between life and death!

Something to think about.

Mitchell Sawatzky

Engineering Liaison

KNOWLEDGE EXTRACTION COMMISSION

Training Exercise

As a constituent office of the Canadian Security Intelligence Service, the Knowledge Extraction Commission is bound by the Canada Labour Code to provide frequent training exercises on ciphers and encryptions to all employees. This includes full time, part time, and contractors.

Often times, Commission employees do not know how information is encoded when it is presented to them. If the output is assumed to be textual and an encoded character maps one-to-one with a plaintext character, employees can take advantage of universally available Cryptogram Solvers. If the result maps one-to-one as English text, cipher characters can be mapped to random Latin characters and Cryptogram solvers can still be employed. However, employees must be cognizant of whether punctuation is supposed to be encoded as a character or left alone.
